

Programming your new Projet Echo remote. Take an existing working remote and your new remote then:

1. Press and hold buttons 1 & 2 on the new remote until the blue light comes on solid then release. The blue light should then flash slowly on its own. You now have 20 seconds to carry out the remaining steps.
2. Place the new remote nose to nose with the existing remote.
3. Press and hold the button on your existing working remote that you would like to copy (the one you normally use to open your gates or door). Keep the button held until the blue light on the Echo starts to flash quickly then release.
4. Press once the button on the Echo remote that you would like to use to open your gates or door. The blue light will come on solid for 4 seconds then go out.
Programming is now complete.
